Subject: TSCA & California Proposition 65 Compliance

---

The Toxic Substances Control Act of 1976 allows the EPA the authority to require reporting, record-keeping, testing requirements, and restrictions relating to chemical substances or mixtures that are manufactured or imported in the United States over 25,000 pounds per chemical on a site in a calendar year. TSCA protects human and environmental health from toxic chemical exposure. Any entity that manufactures, imports, processes, distributes, commercially uses, or disposes of a chemical within the U.S. is subject to TSCA regulations.

Chemicals that appear on the TSCA Inventory List are subject to TSCA reporting and regulations. Chemicals that do not appear on the TSCA Inventory List are defined as new chemicals, which require a notice of process or manufacture to the EPA, along with additional information. For substances listed under sections 4, 5(e), 5(f), 5(a)(2), 5(b)(4), or 6, or is the subject of an order in effect under Section 4 or 5(e) of TSCA; or is the subject of relief that has been granted under a civil action under Section 5 or 7 of TSCA, a lowered reporting threshold of 2,500 pounds per site per year applies.

At this time, Kulite does not import or process more than the TSCA reporting thresholds at a single site during any calendar year for the manufacture of products. Kulite products, or *articles*, contain chemical substances that are not intended to be removed from that article and has no end use or commercial purpose separate from the article it is a part of.

Furthermore, California Proposition 65 is a California law passed in 1986 which seeks to protect drinking water sources from toxic substances and to reduce exposures to harmful chemicals in consumer products with proper labeling. Currently, Kulite products do not need to be labelled under California Proposition 65 guidelines, as the regular and intended use of our products poses no significant exposure risk that is reasonably foreseeable.
