

# MINIATURE RUGGEDIZED PRESSURE TRANSDUCER

## DTL-190 (M) SERIES

- Easy Installation
- Patented Leadless Technology VIS®
- Optimized Frequency Response

The DTL-190 transducer series features an optimized package design that maximizes the frequency response performance by minimizing the effects of acoustic resonance. This design holds the chip and protective screen to the tightest tolerances thereby achieving a flat frequency response of DC to 50+ kHz regardless of pressure range or packaging when properly installed. Kulite provides installation recommendations for all of its threaded probes, please refer to Figures 1(b) and 2(b) in this document; [English](#), [Metric](#).

The DTL-190 features Kulite's rugged leadless construction, capable of making static and high frequency dynamic pressure measurements in any media compatible with 316 SS, silicon, and silicon dioxide. The DTL-190 can be easily integrated into your test stand via the 10-32 or M5 threaded connection that is common to miniature transducers. With the inputs and outputs coupled to a Kulite KSC-2 signal conditioner, extremely low-noise and accurate static and dynamic pressure measurements are achieved. Optional 5th-wire temperature measurements for greater accuracy are also possible - please contact the factory for details. Part performance not guaranteed if used in water.

Kulite recommends the [KSC-2](#) signal conditioner to maximize the measurement capability of the DTL-190 transducer.
