

HIGH TEMPERATURE HIGH BANDWIDTH AMPLIFIED GAS TURBINE PRESSURE TRANSDUCER

ETL-GTS-X-312 (M) SERIES

- Miniature, Robust Construction
- High Temperature
- Acceleration & Vibration Insensitive
- Patented Leadless Technology VIS®
- High Bandwidth Amplifier
- Separate DC and AC Outputs
- Dynamic and Static Capability

The ETL-GTS Series are high temperature, extremely rugged pressure transducers which are ideal for the measurement of instabilities and steady pressures in gas turbine combustors and compressors. They use a patented acceleration insensitive leadless sensing element that is more than 1000 times less sensitive to vibration than other Kulite transducers. The front of the transducers can withstand temperatures of 932°F (500°C)* while the in-line amplifier can be placed in a cooler area. The amplifier is compatible with both existing and new data acquisition systems with a measurement bandwidth of up to 150KHz, specified by Option *. Part performance not guaranteed if used in water.
